Office Action Summary

Art Unit: 3652

1. Applicant's arguments with respect to claims 6-19 have been considered but are moot in view of the new ground(s) of rejection.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 6-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watanabe in view of Loffler, Takami et al and Ito et al.

Watanabe discloses a substantially similar correction system. Note side sensor #130 and Figure 7. It would appear that Watanabe would stop when the image is transferred. If not, Loffler discloses stopping at transferring. Watanabe lacks flag sensors and moving sensors. Takami, et al discloses the use of flag sensors (col. 20, lines 40+). Ito et al discloses a moving sensor in Figs. 4 and 7. It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to substitute such sensors. The motivation is the known use of equivalents.

5. The remaining references are cited to show similar correction systems.
